VAMED acquires cleanpart healthcare

The advent of leading provider of sterile supplies: the new INSTRUCLEAN

Berlin/Duisburg, 02/11/2017. With effect from 2 November 2017, Berlin-based VAMED Management und Service GmbH (VAMED Germany) acquired the majority of the shares in the Duisburg company cleanpart healthcare GmbH as well as sole control of the company. This takeover now marks the advent of the leading supplier of services covering every aspect of sterile supplies (medical device reprocessing) in Germany.

“With its comprehensive portfolio of services, high quality standards and regional presence, cleanpart healthcare GmbH is a perfect fit for us”, stated Dr Ernst Wastler, VAMED’s CEO. VAMED Deutschland has in recent years continued to expand its sterile supplies business field. With the takeover of cleanpart healthcare this section of its core business has once again been significantly strengthened and its range of services expanded to include medical device management (repair and maintenance of surgical instruments). The benefits accruing to cleanpart healthcare were outlined by its managing director as follows: “By belonging to VAMED, the leading international provider of healthcare services, cleanpart healthcare is now able to tap into additional opportunities for development and for securing its future in the long term.”

The long-established reputation for the joint provision of sterile supplies by VAMED and cleanpart healthcare stems from INSTRUCLEAN GmbH, a subsidiary of cleanpart healthcare which operates in Germany and Austria. With the exception of the joint ventures with health institutions, all sterile supply services will in future be marketed and rendered under the, since 1991 well-known, name “INSTRUCLEAN”. This now ushers in a leading supplier of sterile supplies in terms of the depth and breadth of the services offered as well as the national presence. Management of the new company will be entrusted jointly to Klaus Sellinghoff and Dr Klaus Steinmeyer-Bauer, hitherto responsible for the sterile supply business group management at VAMED. They know and hold each other in high esteem and are looking forward to the tasks related to the merger of the business activities under the umbrella of the new INSTRUCLEAN.

With a market presence throughout Germany and its comprehensive portfolio of services, the new INSTRUCLEAN company will in future be able to offer other hospitals, medical care centres and medical practices services covering the entire range of medical device reprocessing / sterile supplies, while assuring maximum security of supply. Thanks to its presence in Austria, INSTRUCLEAN in collaboration with VAMED now has the opportunity to expand its business there as well as to other European countries. Furthermore, both companies intend playing an increasing role in the education and training of medical device reprocessing personnel to meet growing demands and the ever more stringent requirements applicable in this domain.

About cleanpart healthcare

cleanpart healthcare, together with its subsidiary INSTRUCLEAN, is Germany's largest independent provider of medical device reprocessing services. The range of services offered by cleanpart healthcare comprises the provision of advice and consultation on all aspects of medical device reprocessing, continuing education, training and management of medical device reprocessing personnel. This includes organization of specialist technical training courses at the INSTRUCLEAN Academy, business management of sterile supply departments and companies, provision of the operational infrastructure in the form of capacity utilization models, full coverage in-house medical device reprocessing services as well as on a joint venture basis and other forms of cooperation. In addition to medical device reprocessing services, cleanpart healthcare also offers medical device management services, including in particular maintenance of surgical instruments ranging from reworking of instrument surfaces through repair to a complete program for value retention of medical devices.
